A O Smith's new water heater

A O Smith Air2Heat

AO Smith India Water Heating Private Limited, a leading water heater maker, launched renewable energy water heater 'Air2Heat' which is an advanced and innovative product that generates heat from the environment. The water heater uses

electricity to move heat from one place to another instead of using electricity to heat the water. For each unit of electrical consumed, it generates 2.3 units of heat energy. Therefore, it consumes less energy. "In line with our commitment to provide our consumers with exceptional product offerings, we invest our efforts in heeding the demand to a dependable & efficient source of abundant hot water. This has led us to develop this advanced technology in residential water heaters - Air2Heat which is highly efficient, energy saving and environmental friendly. Moreover, they consume 60% less power than a conventional electric water heater," said Tamal Chaudhuri, the company's Managing Director.
